

Assignment 2 - Math 448

Assignment 2: Due 1/28 by email

The goal of this assignment is for you to find datasets out there on the internet and figure out how to import the dataset into Mathematica.

This is a "go out and see what you can find" assignment. To do some of the more fun and interesting stuff in Mathematica, we'll need some data set to play around with. Your job is to find a couple, and figure out how to get them into Mathematica. Mathematica has some built in data sets we can use, but I want you to find data set about stuff you find interesting.

Some suggestions for looking for data sets. Google "icpsr" it's a repository of political science data sets. Look at the census website and other government websites. Look for GIS data sets. A data set of pictures could be interesting.

A complete Assignment includes at least two data sets, your description of the data sets, where you found the data sets, any dictionary file that comes with dataset, and a notebook file that shows how to import and access the data file.

Note: If two students submit the same two data sets, both will receive no credit for this assignment.
